

ALS 4000 SERIES SEMI-AUTOMATIC LABELLERS

ALS[®]

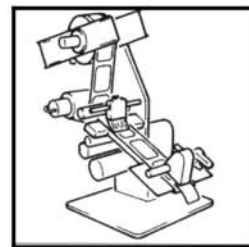

This robust, economical and reliable series of machines offers a low-cost solution to a wide variety of applications in all areas of industry.

ALS 4000 Dispenser

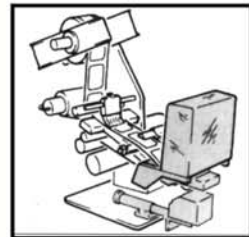

4000 Dispenser

This rugged, desk top label dispenser provides a highly efficient, yet economical method of speeding up your labelling operation. This easy to operate dispenser presents the label, already released from its backing, ready for immediate application onto the product.

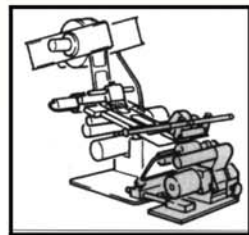

4000 EP - Extending Pneumatic Tamp

This model is designed for highly accurate labelling of flat curved or even recessed product surfaces. A label applicator and product guides ensure accurate label placement. The labels are first of all dispensed onto a vacuumed retaining plate. The product to be labelled is then inserted into a jig which is positioned under the label. The retainer plate then applies the label to the product and the next label is immediately dispensed ready to be applied to a new product.

4000 MRU - Multi-Roller Unit

Designed for full or partial wrap-around labelling of cylindrical products. The 3-roller arrangement can be adjusted quickly for varying product diameters from 8 to 50mm without readjustment of the dispensing edge.
